

GETTING A VACCINE

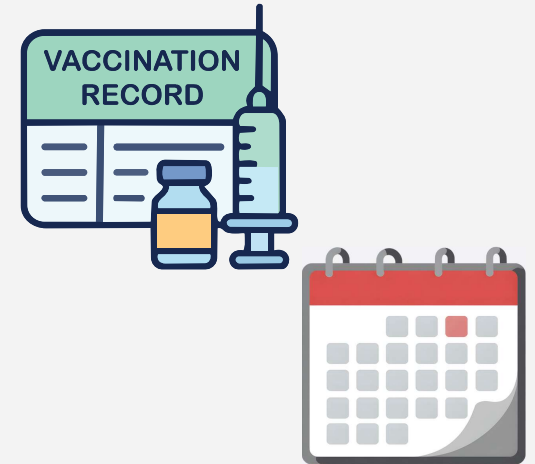

Vaccines help keep me and others healthy.

A vaccine helps people from getting sick.

Sometimes I will only need a vaccine once a year like a flu shot.

Other vaccines like Hepatitis B may be multiple shots over a few weeks or months.

I can get a vaccine at my doctor, pharmacy, or health clinic.

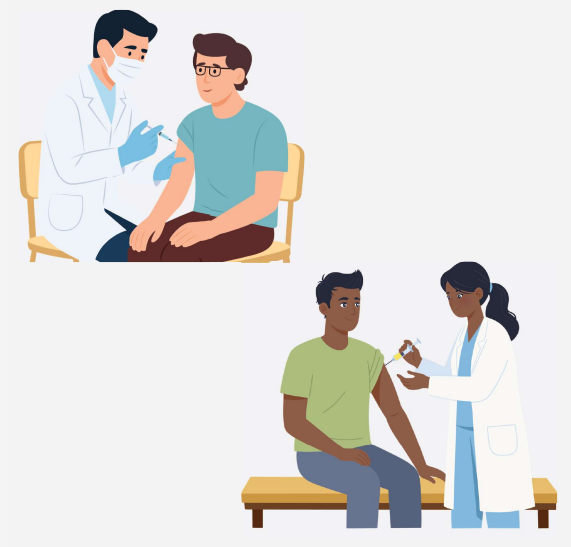

They will ask my name, birthday, and a few questions.

GETTING A VACCINE

I will sit in a chair or on an exam table.

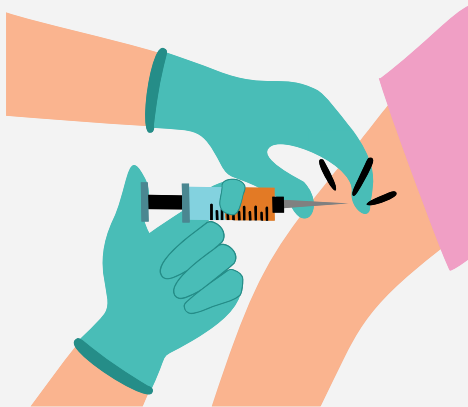

They will push up my shirt sleeve and clean off a spot on my arm with an alcohol wipe.

The wipe may feel cold and smell different.

I may feel a pinch when the needle goes into my arm.

My arm may feel sore for a day or two after getting the vaccine.

They will put a band aid on my arm and then I can leave.
